Application Note V14

1. Introduction

This application note describes the features and functions of Cincon's TRH70A VI series of AC-DC switch power adapters. These are highly efficient, reliable, compact, high power density, single output AC/DC switch power adapters. The switch power adapter is fully protected against short circuit and over-voltage conditions. Cincon's world class automated manufacturing methods, together with an extensive testing and qualification program, ensure that the TRH70A VI series switch power adapters is extremely reliable.

3. Main Features and Functions

3.1 Operating Temperature Range

The highly efficient design of Cincon's TRH70A VI series switch power adapters has resulted in their ability to operate within ambient temperature environments from -20°C to 70°C (40°C~70°C with 2.5%/°C de-rating). Due consideration must be given to the de-rating curves when ascertaining the maximum power that can be drawn from the switch power adapter. The maximum power which can be drawn is influenced by a number of factors, such as

- Input voltage range
- Permissible output load (per derating curve)
- Effective heat sinks

3.2 Output Protection (Over Current Protection)

The switch power adapters provide full continuous short-circuit protection. The unit will auto recover once the short circuit is removed. To provide protection in a fault condition, the unit is equipped with internal overcurrent protection. The unit will operate normally once the fault condition is removed. The switch power adapter will go to hiccup mode if the output current is set from 150% to 170% of rated current.

4. Applications

4.1 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown in Figure 1. When testing the Cincon's TRH70A VI series under any transient conditions, please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate the

- Efficiency
- Load regulation and line regulation

The value of efficiency is defined as:

$$\eta = \frac{Vo \times Io}{Pin} \times 100\%$$

Where:

 V_o is output voltage I_o is output current Pin is input power

The value of load regulation is defined as:

$$Load\ reg1. = \frac{V_{FL} - V_{NL}}{V_{NL}} \times 100\%$$

Where:

 V_{FL} is the output voltage at full load V_{NL} is the output voltage at 60% load

$$Load\ reg2. = \frac{V_{FL} - V_{NL}}{V_{NL}} \times 100\%$$

Where:

 V_{FL} is the output voltage at 60% load V_{NL} is the output voltage at 20% load

The value of line regulation is defined as:

$$Line\ reg. = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where:

 V_{HL} is the output voltage of maximum input voltage at full load

 V_{LL} is the output voltage of minimum input voltage at full load

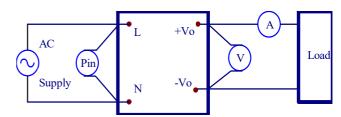

Figure 1. TRH70A VI Series Test Setup

4.2 Output Ripple and Noise Measurement

The test set-up for noise and ripple measurements is shown in Figure 2. Measured method:

Add a C2=0.1uF ceramic capacitor and a C1=10uF electrolytic capacitor to output at 20 MHz Band Width.

5. Packing Information

The packing information for TRH70A series is showing as follows:

ITEM	PART NO.	NAME	OUTSIDE DIM	PCS
1	-	TRH50&TRH70 product	120x52x31 mm	50
2	G64D15057	Plastic bag	0.08x15.5x24.5 cm	50
3	G64205237	Individual box	15x8.5x4 cm	50
4	G64112340	Carton box	455x318x230 mm	1

Each Box Packaging 50 PCS Products Net weight 15 Kg Gross weight 16 Kg
